Screening for anti-neoplastic agent involves exposing cells to chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature generation. determining a change in gene set

Claim 1; SEQ ID 275; 44pp; English.

The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (1) of a signature gene set, where (1) comprises a sequence (S) selected from 8447 sequences (given in ABL6164 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used

                                                                                                                      This sequence encodes the human gravin polypeptide, which represents a polypeptide of the invention. The polypeptides are fragments capable of binding to type II regulatory subunit of cAWP-dependent protein kinase (PKA). Gravin is a kinase anchoring protein that binds to type II regulatory subunits of PKA and protein kinase C (PKC). Gravin is also an antigen of the autoimmune disease Myasthenia gravis (MG), where a patient develops antibodies against their own nicotinic acetylcholine receptors. The polypeptides are useful for providing analogues of gravin in the study of the modulation (e.g. blocking, inhibiting and stimulating) of interactions between gravin and kinase. The peptides are involved in the modulation of gravin-kinase interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         6134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      6508

The present sequence is the coding sequence for human gravin. Gravin is an A-kinase anchoring protein (AKAP) which is involved in the localisation of cAMP dependent protein Kinase A (PKA) via interactions between the RII binding region and the PKA regulatory subunit RII. Gravin is also an antigen found in myasthenia gravis sufferers, and it is hought that antibodies to it may be useful in modulating the binding of PKA, and thus aid in the treatment of the disease. This sequence was isolated by first screening a human umbilical vein endothelial cell cDNA human heart cDNA library with serum from a myasthenia gravis patient, and then searching a human mast cDNA library for sequences resembling the isolated sequence. This was done because the first sequence obtained was shown to be shorter than the full length coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel polynucleotides useful for detecting gravin in patients suffering from Myasthenia gravis encodes cAMP-dependent protein kinase-binding polypeptide and protein kinase C-binding polypeptide of gravin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              281

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical ingoing of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensises, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and advanced the angle of the product of the produce of the produce of the produce of the produce of the produce of the produce of the produce of data and products dependent on DNA and advanced the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 29;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diagnostic coding sequences of the invention.
Note: The sequence data for this patent did not appear in the printed
specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GGGCCCGCAGCTGAAGCCTCGGGA-----GCAGCTGGAGACCCCGCCGACGCGGAC 170

The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the hepatotoxicity of a compound, comprising detecting the level of expression in a tissue or cell sample exposed to the compound of two or more genes listed in the specification, where differential expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                      Rat sequence differentially expressed in response to a hepatotoxin #1223.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             toxic

The method can also be used to identify an agent which modulates the toxic response and predict cellular pathways that a compound modulates in a cell. The methods utilise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer system comprising a database containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a set of genes comprising at least two genes listed in the specification, and a user interface to view the information used to present information identifying the expression level in a tissue or cell of at least one gene listed in the specification. The method is useful for elucidating global charged in the specification. The method is useful for elucidating global
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  changes in gene expression and for identifying toxicity markers in tissues or cell exposed to a known toxin. The genes may be used as coxicity markers in drug screening and toxicity assays. The genes and gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a gen which is differentially expressed in response to a hepatotoxic agent.

                                                                                                                                                                                                                                                                                                                                                                   proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequences can be used for producing secreted human gene products. The can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells. Also included are methods of predicting at least one toxic effect of a compound, comprising detecting the level of hepatotoxicity of a compound, comprising detecting the level of expression in a tissue or cell sample exposed to the compound of two or more genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression. The method can also be used to identify an agent which modulates the toxic response and predict cellular pathways that a compound modulates in a cell. The methods utilise a set of at least two probes (on a solid

support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer system comprising a database containing information identifying the expression level in a tissue or cell sample exposed to a hepatocoxin of set of genes comprising at least two genes listed in the specification, and a user interface to view the information used to present information identifying the expression level in a tissue or cell of at least one gene identifying the expression and for identifying toxicity markers in changes in gene expression and for identifying toxicity markers in changes in upon a known toxin. The genes may be used as coxicty markers in drug screening and toxicity assays. The genes and gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence as (85%) or cDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Expressed sequence tag; secreted protein; haematopoiesis regulator; tissue growth; activin; inhibin; tumour invasion suppressor; EST; human; chemotaxis; chemokinesis; haemostasis; gene therapy; thrombolysis; receptor; ligand; anti-inflammatory; tumour inhibitor; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents an expressed sequence tag (BST), and is a polynucleotide of the invention. The polynucleotides of the invention all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activities are suppressed activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         haematopoiesis regulating activity, tissue growth activity, activity, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3871

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5963
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of t specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5
                                                                                                                                                                                                                                                                                                                  the encoded proteins (AAO000010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polympeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activinhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Note: The sequence data for this patent did not form part of the printer specification, but was obtained in electronic format directly from WIPO

This sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activity, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, auti-inflammatory activity, cabherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2, A Sequence 2, A Sequence 1, A Sequence 1, A Sequence 15, Sequence 15, Sequence 15, Sequence 15, Sequence 15, Sequence 15, Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequence 12, A Sequenc

```

Sequence 1, Application US/08910647
Patent No. 6251433
GENERAL INFORMATION:
APPLICANT: Zuckermann et al.
TITLE OF INVENTION: Compositions and Methods
TITLE OF INVENTION: Polynucleotide Delivery
NUMBER OF SEQUENCES: 4

US-80-807-193A-15

Sequence 15, Application US/08087783A

Patent No. 5547856

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: HEPATOCYTE GROWTH FACTOR VARIANTS
NUMBER OF SEGURGES: 22
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genentech, Inc.
STREET: 460 Point San Bruno Blvd
CITY: South San Francisco
STATE: California
COMPUTRY: USA
ZIP: 94080

COMPUTRY: USA
ZIP: 94080

COMPUTRY: EADABLE FORM:
MEDIUM TYPE: 3.5 inch, 1.44 Mb floppy disk
COMPUTRY: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: MinPatin (Genentech)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/087,783A
FILING DATE: 13-911-1993
CLASSIFTCATION: 435
PRIOR APPLICATION DATA:
APPLICATION NUMBER: 07/884811
FILING DATE: 18-MAY-92
PRIOR APPLICATION NUMBER: 07/885971
FILING DATE: 18-MAY-92
